Heading

Sprint 2 Report

Product name: WebWatch

Date: 11/05/24

Actions to stop doing:

- For tasks taking too long to complete, we should collaborate sooner
- Making too large of tasks during planning – some of our tasks could have been broken down into 5-10 smaller tasks
 - This would give us more realistic time estimates for implementation
- Update Jira with estimated time for tasks immediately after creating them
- Be more reactive to changing situations and be realistic when modifying tasks

Actions to Keep doing:

- We hold regular meetings throughout the week whenever possible. This schedule provides our team with ample time to focus on individual tasks between our longer discussions

Work Completed:

We've completed about one-third of our tasks, primarily on the frontend. Some features can't be tested without a fully functioning backend. The backend has made some progress, including storing information in the database, user registration, and login. However, delays in this component are making it difficult to work on other planned tasks.

Completed:

- As a user, I would like a web interface that allows me to create and log in to my own account. (5)
- As a user, I would like a dashboard to create and modify monitoring tasks in my account. (3)
- As a user, I would like a graphical interface to view monitoring jobs in my account. (5)

Not Completed:

- As a user, I would like to be able to log in with external identity providers, like signing in with Google (OpenID/OAuth). (5)

Work Completion rate (according to Jira Burnup Chart):

Number of user stories completed: 1

Number of completed work hours: 1 day 5 hours

Number of total estimated hours: 1 week 1 day 5 hours
