Sprint 3 Report

Based on the following template/requirements:

Heading

Sprint 3 Report
Product name: WebWatch
Date: 11/19/24

Actions to stop doing:

- Don't wait to assign time estimations to tasks on scrum board until they're completed, try to do it when they're first created. Additionally, spend more time planning upfront to avoid creating as many new tasks throughout the sprint.

Actions to Keep doing:

- As soon as we recognize something that needs to be done, add it to the scrum board
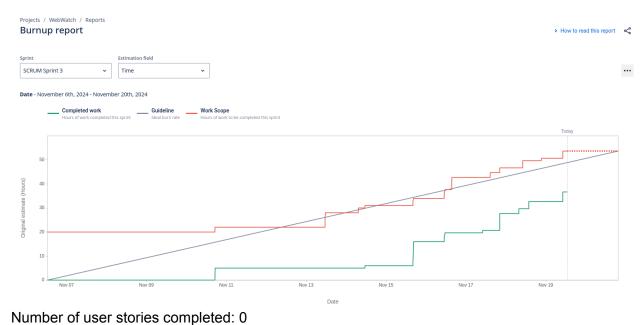

Work Completed:

- We completed our web application's core functionality which involved completing most of our previous product backlog (primarily of tasks from sprint 2).
- We added new user stories to reflect the progress that we did make, despite moving our originally planned user stories to the product backlog:
  - As a user I want better account privacy and security, such that others aren't able to access or modify my tasks.
  - As a user I'd like to be able to reset my password.
  - As a user I'd like to be able to delete my account.
  - As a user I want a simpler task scheduling mechanism.
  - As a user I want a more intuitive task creation interface.
  - As a user, I want an easy way to test whether my notifications are configured correctly, without waiting for a website to change at an arbitrary time.

Not Completed:

- We did not fully complete either of our original user stories for this sprint due to a large backlog of items that were higher priority. At this time, we have only started research and experimentation for using a specific component's xpath for scraping.

Work Completion rate (according to Jira Burnup Chart):
